

MCQs:

1) Which of the following statements about `addEventListener()` is True.

i) The first argument to `addEventListener()` is the event type for which the handler is being registered.

ii) The second argument to `addEventListener()` is the function that should be invoked when the specified type of event occurs.

iii) The third argument to `addEventListener()` is a numerical value.

A. i and ii only (Answer)

B. i and iii only

C. ii and iii only

D. All i, ii and iii

2) Invoking more than once on the same object with the same arguments has no effect, the handler function remains registered only once, and repeated invocation does not alter the order in which handlers are invoked.

A. `addEvent()`

B. `addMultipltEvent()`

C. `attachEvent()`

D. `addEventListener()` (Answer)

3) What property on the event object contains the DOM object that invoked the event?

event.element

event.source

Event.target (Answer)

Event.invoker

4) To successfully remove an eventlistener, the correct syntax is:

a. `this.removeEventListener('event');`

b. `this.removeEventListener('event',function);` (answer)

c. `this.removeEvent('event',function);`

d. `this.removeEventListener(new Event('event'),function);`

5) How to detect and respond to mouse drags?

a) Registering a mouseover handler

b) Releasing a mousedown handler

c) Registering a mousedown handler (Answer)

d) Releasing a mouseover handler
